Edwards AFB personnel are still reviewing the El Paso Line 1903 Pipeline Conversion project and will be submitting additional comments when they complete their review. However, I do want to send you the following comments at this time to include in the easement document:

F-1 **"Please ensure that if any physical work outside the pipeline is required, a digging permit is submitted and Edwards AFB Civil Engineer personnel including environmental are given an opportunity to review the digging permit and construction plans. Environmental's review of the digging permit may conclude that an AF Form 813 is also required before digging can commence."**

Thank you

Sharon McLain
